32-1

Mr. Thompson,
Something is blowing in
the wind in the A.V. I have
lived here for 45 years &
have never suffered from
the dust as much as
this year. If you can
bring back the alfalfa
fields, that would be
great. The farmers now
grade plant + run

leaving the bare fields to
blow. If you allow the
spraying of bio-pesticides I
fear for the health of
the people of the A.V.
Please stop the
torment of the people
in the High Desert.

No. Sludge!
Thank you
Mrs. Sally Radics

Responses to Comments from Sally Radics

- 32-1. Commenter is correct that some biosolids application could occur within the Antelope Valley, subject to the limitations imposed by the proposed GO. To address the concern for spreading biosolids in the drier, windy parts of the state, the proposed GO has been modified to include moisture content restrictions and rules for incorporating biosolids into the soil. Refer to Appendix A for a revised version of the proposed GO.
- 32-2. Please see Response to Comment 32-1.
